Flutter Internship Task

Using https://newsapi.org/ create an application to read Top headlines from your selected sources.

The application has an article list screen where we can see the list of articles containing article titles, short descriptions, and photos. Articles can be refreshed with pull to refresh action. By clicking on any article the application should open the article detail screen with more information such as article author, published date, and link to the original article which opens a web browser.

VISMA

Requirements:

- The application can use any state management approach such as setState, Bloc, riverpod, mobX, etc. or you can choose one from the [List of state management approaches | Flutter](https://docs.flutter.dev/development/data-and-backend/state-mgmt/options) (https://docs.flutter.dev/development/data-and-backend/state-mgmt/options).

- Structure, and store the data as you see fit to render the content on the screens.

- Provided designs meet the functional requirements. There is room for UX/UI improvements - add your own styling to the solution if possible.

- We are looking for an app that meets all of the above criteria as well as presents users with a simple and intuitive UI. Clean and easy-to-understand code will play a major part in our scoring.

- Application has to support Android 26, iOS 13, other platforms are optional.

- Push finished code to a Git repository and share the link with us.
